

## **THE JABRA GN1000 HANDSET LIFTER**

The handset lifter allows you to use a wireless headset when you are away from your desk, the GN1000 is compatible with almost any telephone that has the handset on the left side (most phones do) as long as there is a support to the mouth piece side of the handset so the handset lifter can raise the top (ear piece end) of the handset without the bottom (the mouth piece end).

The following are some popular phones that the GN1000 works on that we sell.

- All Nortel telephones
- All Avaya telephones
- All Panasonic telephones
- All Toshiba telephones
- Also most top brands

Telephones that it will not work properly on are the Aastra 55i and 57i phones because there is nothing to hold the bottom (the mouth piece end) of the handset to allow the handset to lift without sliding down so the handset will not go back into the cradle and hang up the call.
