

Jabra Corded Headsets – GN 2100 Series

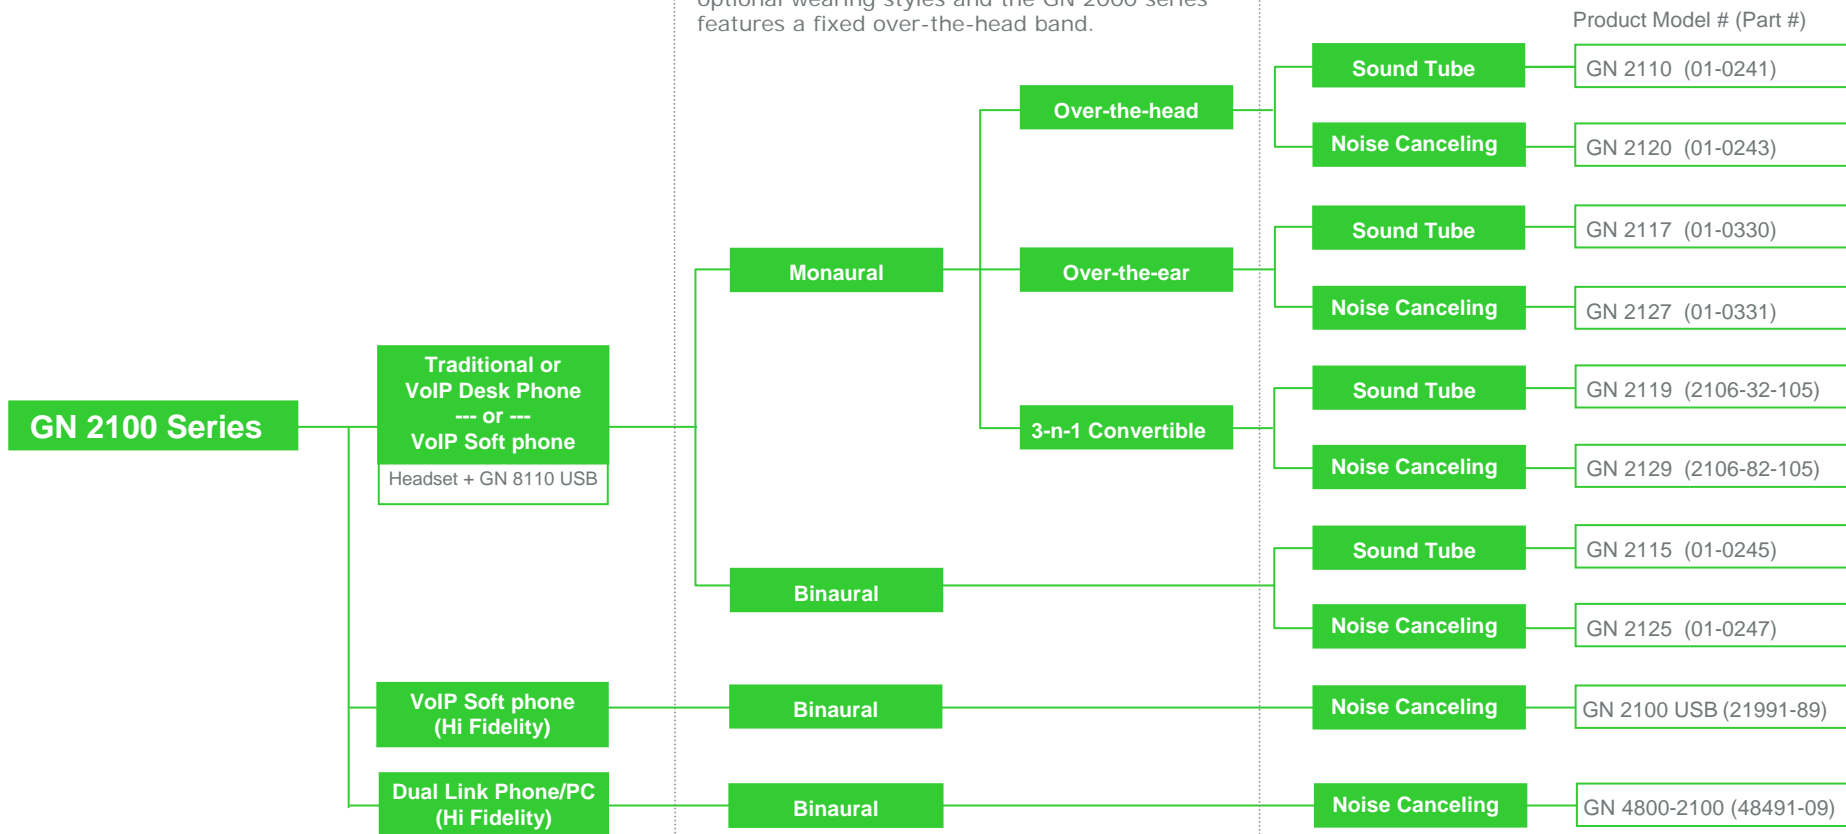

There are a number of corded product models to fit every user's needs, from traditional to VoIP telephony, one ear and two ear speakers, multiple wearing styles and microphone booms to suit your environment. Choosing the right headset for your unique requirements is really simple ...

Phone – will the headset be used with a traditional phone, VoIP hard or soft phone for IP telephony?

Speakers – there are two audio speaker options, one ear (monaural) and two ears (binaural) to meet your preference

Wearing Style – the GN 2100 series features optional wearing styles and the GN 2000 series features a fixed over-the-head band.

Microphone – choose between a sound tube for low noise levels or noise canceling for loud environments

Wideband refers to the frequency range transmitting and receiving sound. Traditional telephony is defined as 300-3,400 Hz. Wideband as 150-6,800 Hz.

A VoIP hard phone is a specialized IP telephony desk phone. It looks and sounds like a regular telephone but does not connect to a telephone line. Instead it connects to an IP network.

A soft phone is a program that enables IP telephony telephone calls from a laptop or desktop PC. When using a soft phone, you need a headset. The interface between the headset and the computer is either a USB adaptor or a Wireless interface like Bluetooth.

Jabra Corded Headsets – GN 2100 Series

Flexibility and Design for the Professional.

Designed for the office professional, executive in touch, qualified contact center and other business environments the GN 2100 series delivers unsurpassed sound quality and crystal clear conversation. The sleek profile and lightweight, ergonomic design provide a unique combination of style and comfort. The 3-in-1 design takes personal comfort to a new level, allowing each user to select the most comfortable wearing style. For the ultimate in hi-fi stereo sound, the GN 2100 is also available in a plug-and-play, Microsoft Windows® compliant USB version with in-line sound and mute controls. The GN 2100 is also equipped with our PeakStop™ technology, which protects users from harmful sound spikes and other loud noises over 118 db SPL (RMS).
