

## Embedded Voicemail (IP406 V2 and IP Office - Small Office Edition only)

In environments like retail or home office where no space for a PC is available or you do not want to keep a PC running all the time (notably to avoid the risk of someone accidentally switching off the PC thereby taking away the voicemail service), Embedded Voicemail may be the preferred option to enable an entry-level voicemail service.

On the IP Office Small Office Edition and the IP406 V2, Embedded Voicemail can be installed to provide an entry-level voicemail service. With the Small Office Edition this solution does require a voice compression channel for each call that it handles. The maximum number of messages stored is only restricted by Embedded Voicemail cards storage capacity (currently around 10 hours on the Small Office Edition and 15 hours on the IP406 V2).

### The features available include:

- ✓ No License Key required.
- ✓ 4 independent Auto Attendants (AA).
- ✓ 3 time profiles per AA.
- ✓ Up to 12 menu items per AA.
- ✓ Auto Attendant - automatic time out to fallback location: Default set to 8 seconds.
- ✓ 3 Port voicemail as standard on Small Office Edition (10 ports with 16VC variants of SOE), 4 port voicemail for IP406 V2.
- ✓ Up to 10 hours' storage on SOE (small office Edition), 15 hours message storage on the IP406V2.
- ✓ Default local access from each extension.
- ✓ Define system-wide short code for Voicemail Collect.
  - Set access code/PIN for each extension for secure access.
  - Configurable record time: Default value 2 minutes, maximum value 3 minutes.
  - Access codes: Minimum of 4 characters to be set.
  - Multiple languages stored on the Flash Memory card.
  - Help menus with Greetings & Mailbox Navigation.
  - Voicemail Breakout: Press 0 at any time to return to the operator.
