

IP 400 Phone WAN3 10/100 Module (700262009)

IP400 WAN3 10/100 module. Used to provide auto-sensing 3 additional X.21/V.35 ports (socket and using an appropriate connector cable). Line speeds up to and including 2Mbps are supported on each interface, the carrier providing the line dictates the actual operating speed. The IP400 Office WAN3 10/100 may be connected to the IP406 and IP412 platforms to provide additional WAN ports. Each platform, except Small Office Edition, can support up to two WAN3 10/100 modules.

The IP400 Office WAN3 connects to the base unit through the Local Area Network via a 10/100Mbps connection and does not use an expansion port on the control unit so it does not impact on the maximum number of external expansion modules supported. Require 1 rack mount kit and 1 power lead.
