

Lucent Transtalk Dual Radio Module for Magix/Definity Systems (3204-DRD) (Compatible on 412/024 TDL Module)

TransTalk 9040 Dual Radio Module for use with the TransTalk 9040 Wireless handset. For use in the Magix and Definity environments. This module can support up to two wireless handsets. It is compatible with single and dual zone configurations. Allows linked configuration for connecting more than one radio module to a single station port. The new module eliminates the need for the Carrier Assembly units that were required on the TransTalk 9031 phones. The modules are now line powered, eliminating the need for a separate, local AC power supply. The modules can be self-standing or wall mounted on a standard mounting bracket. Compatible with the 412TDL and 024TDL modules on a Merlin Magix system R1.5 or higher.
