

Business Series Terminals

The Business Series Terminals (T- series Telephones) delivers value-added features.

- ✓ **Tilt Display** – provides clearer viewing of information or message prompts on the LCD in different lighting environments.
- ✓ **Message Waiting Indication (MWI)/Visual Ringing Lamp** – alerts the user of incoming messages or that their phone is ringing when they are on another call.
- ✓ **Headset Interface** – is driven from the Digital Terminal Interface Chip (DTIC). Volume control for the headset is also provided. Operation of the headset is mutually exclusive with Hands free operation. When a headset is connected, all operations normally associated with Hands free operation affect the headset. This includes on-hook dialing, volume control while active and muting.
- ✓ **Hands free Interface** – is programmed through the administration function and is supported by a microphone and loudspeaker.
- ✓ **External Ringer Interface** – receives alerting signals that are routed to the external ringer jack as well as to the speaker in the telephone. This alerting signal can be amplified and connected to external speakers to provide an auxiliary ringer function for the telephone. The external speaker is connected with a two-wire modular telephone cord to pins three and four of the external ringer jack.

Sets are available in the following colors:

- Platinum
- Charcoal
